© Abstract: The present invention discloses one new kind of polypeptide-human CD63 antigen 14.63, polynucleotide for encoding this polypeptide and DNA recombination process to produce the polypeptide. The present invention also discloses the method of applying the polypeptide in treating various diseases, such as embryonic development malformation, autoimmunity disease, tumor, etc. The present invention also discloses the antagonist for

No active trail

resisting the polypeptide and its treatment effect. The present invention also discloses the application of the polynucleotide for encoding human CD63 antigen 14.63.
